

Green Escape

Components made from environmentally friendly material sprout up all across the all-new Ford Escape, which is expected to attain class-leading fuel economy as well as be a minimum of 85 percent recyclable. Here's a look at some of the key green parts:

Drive green.

Carpet

Made from 25 recycled 20-ounce plastic bottles

Seats and head restraints

Contain 5 percent soy foam

Dash insulation

Contains more than 10 pounds of scrap cotton from jeans, sweaters, T-shirts and other items

Climate control gasket

Contains 100 percent recycled tires

Tailpipe trims

Polished stainless steel instead of less environmentally friendly chromium-plated trims

Powertrain undershields

Contain 100 percent recycled plastics

Other actions aiding fuel economy

The all-new Ford Escape employs several clever solutions to deliver what's projected to be class-leading fuel economy. These include:

- 3 Two available EcoBoost® engines
- 3 Six-speed automatic transmission standard
- 3 Available low-rolling-resistance tires
- 3 Active Grille Shutter System

Wheel arch liners

Contain 100 percent recycled plastics
