

# Ford's Fuel-Economy Leadership

Ford Motor Company continues delivering on its promise to make fuel economy affordable for millions of consumers with 12 vehicles including cars, utilities and crossovers in the U.S. that lead their sales segments in fuel economy – a number no other automaker matches. Ford also offers four vehicles that achieve 40 mpg or more. Record investment in new engines, six-speed transmissions and new fuel-saving technologies such as EcoBoost™ has raised Ford's fleet average fuel economy performance faster and at a greater percentage than any major automaker, according to a report from the EPA.
