

Voice-Activated Navigation

Ford's Voice-Activated Navigation system is loaded with features and functions designed to provide a superior level of connectivity and information while on the road. Coupled with SIRIUS® Travel Link™ and SYNC with Traffic, Directions and Information, both Ford Motor Company exclusives, the navigation system also acts as the hub for up-to-the-minute news about weather, traffic, gas prices, movie listings, sports scores and more. Need-to-know information is always a voice command away and since the navigation system is factory-installed, it works seamlessly with other integrated Ford features and connectivity technologies like SYNC.

Ford Home Screen

Customers can customize the Navigation System's home screen with favorite family and/or vacation photos. The system can store up to 32 jpg/jpeg/jpe files up to 1.5 MB each.

Jukebox

The digital jukebox can store approximately 2,400 songs and enables users to browse their music library via the screen or through voice activation.

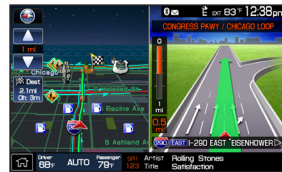

SIRIUS Satellite Radio

The navigation screen displays the SIRIUS channel icon for easy recognition, as well as artist and song title information.

SIRIUS Travel Link

SIRIUS Travel Link connects users to up-to-date traffic, weather, fuel prices, movie listings, sports scores and more. Movie listings highlight show times, run lengths and ratings. The system can sort theaters by distance and direct drivers to the selected location and access schedules and scores for your favorite sports teams. Users can view incident information and avoid slow areas with a recalculated route, check out current weather conditions for an area, view a five-day forecast or scan a coast-to-coast weather map. Fuel information can be sorted by price, distance or alphabetically.

3-D Bird's-Eye

The new 3-D bird's-eye map has a day- and nighttime view, displays various brand icons and landmarks along a route, and can split screen to provide detailed freeway exit, turn and ramp transition lane guidance.

Touch-Screen Automatic Climate Control

Touch-screen automatic climate control is available on voice-activated touch-screen Navigation System-equipped vehicles with an 8-inch touch screen.

HD Radio Technology

HD Radio technology provides broadcasts with dramatically better sound quality thanks to digital transmission – FM sounds like a CD and AM sounds like today's FM broadcasts. And unlike analog broadcasts, digital broadcasts aren't susceptible to interference, fadeout and other issues.

2010 Ford Flex

Ford SYNC with Traffic, Directions and Information

Users can connect to Ford's award-winning communications and entertainment system using voice commands or the system's touch screen. Traffic, Directions and Information leverages industry-leading voice recognition software, integrated GPS technology and a Bluetooth-capable mobile phone to deliver personalized traffic reports, precise turn-by-turn directions and up-to-date information including business listings, news, sports and weather.
