

FORD WINDSOR SITE

"Whether you think you can, or you think you can't, you are right."

– Henry Ford

Employment

Essex Engine Plant (EEP)

Hourly: Approximately 800
Salaried: Approximately 80

Windsor Engine Plant (WEP)

Hourly: Approximately 600
Salaried: Approximately 70

EEP Size

1,900,000 square feet on a 260-acre site

WEP Size

2,100,000 square feet on a 149-acre site

Plant facts

- The 5.0-litre V8 engine, produced at EEP, is found in the Ford Mustang and Ford F-150
- The 6.8-litre V10 engine, produced at WEP, is found in the Ford F-Series and Ford E-Series
- In Canada, Mustang has been the best-selling sports coupe since 1985
- In 2015, the Mustang became available to customers in more than 100 markets around the world
- Ford F-Series has been the best-selling truck in Canada for 50 consecutive years

History

- Housed on the site of the Windsor Plant that opened in 1923, WEP opened in 1994 building 4.6-litre and 5.4-litre V8s, as well as the 6.8-litre V10
- First product produced at EEP was the RWD 3.8-litre V6
- Windsor Site is home to the Powertrain Engineering Research and Development Centre (PERDC) which opened in 2003
- EEP is the only plant in Ford's North American restructuring plan that was re-opened
- EEP received landfill-free status in 2012 and WEP received landfill-free status in 2013
