All-New Ford Mustang Convertible.

Few activities evoke a feeling of freedom and optimism better than dropping the top on a Ford Mustang Convertible and hitting the open road. The all-new Mustang Convertible was designed and engineered from the ground up in parallel with the Fastback to ensure it met the same exacting standards of quality, refinement and style. The fully lined top is both better looking and functional in that it now makes the cabin even quieter with the top up. The standard cloth outer layer provides Mustang Convertible with an even more upscale appearance.

Mustang Convertible features unique rear bodywork that gives it clean, cohesive lines and a presence on the road that is all its own.

The newly designed top system folds into a flatter and more compact stack than the previous Mustang Convertible. The highest point of the folded top is now 6.7 inches lower than before and the new electromechanical drive stows the top in just seven seconds, twice as fast as before.

Simple snap-in side caps complete the clean top-down appearance and stow easily in the trunk.

A new one-handed center latch lets the driver release the power-top without leaning across the car.
