¹Based on full charge. Actual range varies with conditions such as external environment, vehicle use, vehicle maintenance, lithium ion battery age and state of health. ²Ford test data based on typical industry methodology using 1-ft rollout. Your results may vary. ³Calculated via peak performance of the electric motor(s) at peak battery power. Horsepower and torque are independent attributes and may not be achieved simultaneously. ⁴BlueCruise is a hands-free highway driving feature.

⁵Range and charge time based on manufacturer computer engineering simulations and EPA-estimated range calculation methodology. The charging rate decreases as battery reaches full capacity. Your results may vary based on peak charging times and battery state of charge. Actual vehicle range varies with conditions such as external environment, vehicle use, vehicle maintenance, lithium-ion battery and state of health. ⁶Cargo and load capacity limited by weight and weight distribution. Cargo capacity based on load floor in the lowest position.
