Development Continues on Built Ford Tough All-Electric F-150; Watch Prototype Tow More Than 1 Million Pounds

- Read a Medium blog from Ted Cannis, Ford's global director of electrification, about the company's future plans by [clicking here](#).

DEARBORN, July 23, 2019 – As America's truck leader, we prefer to let our actions speak louder than words.

Watch as Linda Zhang, chief engineer of the Ford F-150, shows the capability of a prototype all-electric F-150 by towing 10 double-decker rail cars and 42 2019-model year F-150s, weighing more than 1 million pounds.¹

Ford has confirmed it will bring an all-electric F-150 to market. This will be in addition to the all-new F-150 Hybrid that goes on sale next year. Both electrified models will have the toughness, capability and innovation that F-150 customers have come to expect.

That's Built Ford Tough.

¹ The F-150 prototype is towing far beyond a production truck's capacity in a one-time short event demonstration. Never tow beyond a vehicle's towing capacities. Always consult the Owner's Manual.
