

# Mobility Experiment: Parking Spotter, Atlanta

## Fact Sheet: Parking Spotter

This experiment, conducted with Georgia Tech, leverages driver-assist sensors that most Ford vehicles already have, including sonar and radar, by putting them to work for everybody. The sensors search for open parking spaces while the driver looks for spots around the city, and share the information with a cloud database other drivers can access. The system makes it easier for a driver to locate an open spot, reserve it and navigate to the space. It also reduces fuel consumption and carbon dioxide emissions.

### **The Experiment**

Existing vehicle sensors detect open parking spaces to help create a data source for parking-assist apps.

### About Ford Motor Company

Ford Motor Company is a global company based in Dearborn, Michigan. The company designs, manufactures, markets and services a full line of Ford cars, trucks, SUVs, electrified vehicles and Lincoln luxury vehicles, provides financial services through Ford Motor Credit Company and is pursuing leadership positions in electrification, autonomous vehicles and mobility solutions. Ford employs approximately 203,000 people worldwide.
