Ford Motor Company Issues Recall for Select 2019 Ranger Vehicles to Verify Shifter Interlock Functionality

DEARBORN, Mich., Feb. 6, 2019 – Ford is issuing a safety compliance recall on certain 2019 Ford Ranger vehicles to verify shifter interlock functionality. In the affected vehicles, the PRNDL bezel wiring may interfere with the shifter interlock override, preventing the shifter from locking in the park position and allowing the driver to shift the transmission out of park with the vehicle off and without a foot on the brake pedal.

Ford is not aware of any accidents or injuries resulting from this condition.

This action affects approximately 3,500 Ranger vehicles in North America, including approximately 3,000 in the United States and 500 in Canada.

Affected 2019 Ranger vehicles were built at Michigan Assembly Plant, June 4, 2018 to Jan. 9, 2019.

Dealers will verify shifter interlock functionality by attempting to move the transmission shifter out of park with the vehicle off and without a foot on the brake pedal. If the shifter moves out of park, dealers will look for wiring interference, relocate the wiring and retest. The Ford reference number for this recall is 19C02.

About Ford Motor Company
